NEBRASKA AGRICULTURAL STATISTICS

NEBRASKA DEPARTMENT OF AGRICULTURE
Larry E. Sitzman, Director

Cooperating with

UNITED STATES DEPARTMENT OF AGRICULTURE
NATIONAL AGRICULTURAL STATISTICS SERVICE
Donald M. Bay, Acting Administrator
Fred S. Barrett, Director, State Statistical Division

Issued October 1993, by the

NEBRASKA AGRICULTURAL STATISTICS SERVICE

This publication is dedicated to Jack L. Aschwege, Nebraska's State Statistician for the past 18 years, who retired after 38 years of government service on October 2, 1993. Jack sincerely enjoyed his role of gathering and providing useful statistics on Nebraska's major industry -- AGRICULTURE. Nebraska's agricultural community and our entire office and field staff will miss Jack's input and dedication, but wish him well in retirement.

I have served with Jack as his Deputy State Statistician for the past 15 years and have been appointed to be Nebraska's new State Statistician. Our entire staff looks forward to continuing to collect and provide quality, accurate agricultural statistics and serve Nebraska agriculture.

Sincerely,

Bill Dobbs

Bill Dobbs, State Statistician

Material for this publication was assembled by
Charlotte R. Rowe, Office Automation Assistant.

Special appreciation is extended to the entire office and field staff for their public service, dedication and assistance in conducting surveys, summarizing data and assembling the numerous estimates presented in this publication and other releases throughout the year.

PREFACE

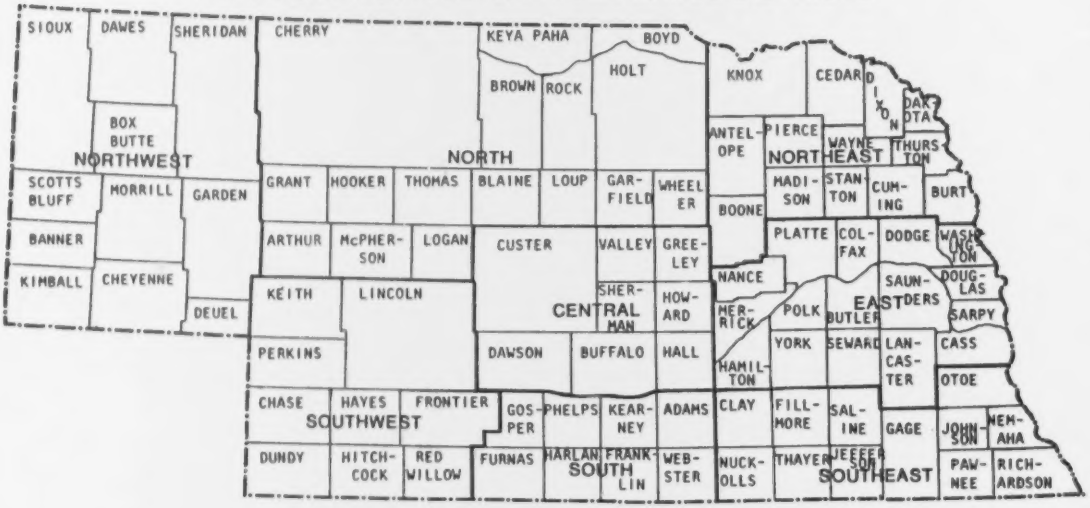
Information in this statistical summary of Nebraska agriculture is the result of thousands of voluntary reports from farmers, ranchers and agribusiness firms. Much of the detail needed for county estimates was collected from farmers and ranchers by mail with the Annual Agricultural Survey and acreage and livestock surveys. County extension staff, local lending institutions, ASCS county offices, Vocational Agriculture classes, SCS volunteer reporters and the National Weather Service have also contributed through weekly reports on weather and crops. The excellent cooperation from all the above-mentioned and other State, University and USDA agencies is very much appreciated.

The Nebraska Department of Agriculture and the United States Department of Agriculture cooperate in collecting and compiling these agricultural statistics. Under this cooperative agreement, the Nebraska Agricultural Statistics Service publishes over 100 statistical reports annually covering most Nebraska agricultural commodities.

This publication provides Nebraska county, agricultural statistics district and State data on selected agricultural items most used by agricultural data users. Selected data are also shown for the U.S. and special State groupings.

For 1992, county estimates for most crops, livestock and farm numbers are preliminary and subject to revision. Final estimates for 1990 and 1991 for most crop data series and county livestock estimates for 1988-1993 are published in this publication. Many other statistics about agriculture are available upon request.

NEBRASKA AGRICULTURAL STATISTICS DISTRICTS



To request releases with current agricultural statistics issued during the year or additional copies of this report, please complete and return the appropriate (Free or For Pay) Subscription Request Form shown in the back of this report. In addition, historic county and state data may be available on diskette upon request.

STATISTICAL METHODS

GENERAL

The Nebraska Agricultural Statistics Service has two primary objectives:

1. To develop accurate, reliable agricultural statistics.
2. To move those statistics to users as rapidly as possible.

Data collection to achieve these objectives involves sample surveys of farmers and ranchers, grain companies and elevators, auctions, packing plants, retail stores, and many other agricultural enterprises.

From data reported by these many sources, statisticians, using all available statistical tools, generate State totals forming official State and USDA estimates. Cooperation of USDA and the Nebraska Department of Agriculture provides resources for distribution of State totals into agricultural statistics district and county estimates.

Analysis and interpretation of these basic statistics are performed by others, such as University of Nebraska Extension Specialists, private economists, and the producer. Our role is to provide basic data and every effort within available resources is made to provide accurate and timely information. This process begins with survey design and continues through data collection, summarization, analysis and finally the release of the crop, livestock and price statistics.

STATE ESTIMATES

The U.S. Department of Agriculture is required by law to provide State and National crop, livestock and price statistics for each major producing State.

For many years, mailed non-probability surveys served as the backbone of data gathering and they are still used to some extent. Today, probability sampling, a more sophisticated sampling procedure, is being incorporated as funds and applied technology allow. Some types of probability sampling used in Nebraska are Area Frame Sampling, List Frame Sampling, and Multiple Frame Sampling. Sampling farm operators in a specifically outlined geographic area is known as Area Frame Sampling, while sampling a list of all known producers of a specific commodity is known as List Frame Sampling. A technique called Multiple Frame Sampling takes advantage of the attributes of both the Area and List samples. Area Frame Sampling is used in Nebraska for most crop acreage and livestock items and Multiple Frame Sampling is used for estimating major crop and livestock items.

The concept of probability sampling is maintained in all three types of sampling. Data collection for the probability surveys involves personal enumeration and telephone or personal followup for all non-respondents to mail questionnaires. These probability surveys are expensive on a per sampling unit basis but yield State results that have greater precision and allow measurement of the sampling error. Good cooperation from survey respondents contributes heavily to accuracy. A very dedicated staff of field enumerators and office telephoners assist in collecting accurate survey data.

Three of Nebraska's major crops (corn, soybeans and wheat) are measured by objective yield procedures. Forecasts before harvest incorporate plant counts, kernel and head counts and weight. Sample fields are entered with permission of growers, by field enumerators from May through October to take counts and measurements during the growing season. After harvest, gleaning provides estimated harvesting loss. Monthly crop reporters give dependable mail survey yield indications during the season.

COUNTY ESTIMATES

Federal appropriations and regulations support State estimates for specific agricultural items that are important in National totals and some county level estimates. When additional items or geographic descriptions within States are needed, supplemental funding is required. To provide estimates by county, for example, requires a much larger sample because each county must have enough reports to provide a sound basis for estimates. Our acreage surveys and Annual Agricultural Survey give every operator a chance to report annually and provide a solid basis for county estimates.

CHECK DATA

In addition to producer surveys, check data are collected from the marketing channels, county extension agents, ASCS, etc., to verify or supplement the grower survey data. These data become available -- usually long after harvest and are used to establish final production and marketing figures.

The final estimate is arrived at when all grower survey data and marketing data (check data such as: handler or processor receipts, slaughter, and market shipments) have been analyzed. These data then become the statistical history against which current forecasts and estimates are viewed.

STATE RANKINGS -- TEN LEADING STATES

CROP PRODUCTION - 1992

Item	Unit	1	2	3	4	5	6	7	8	9	10

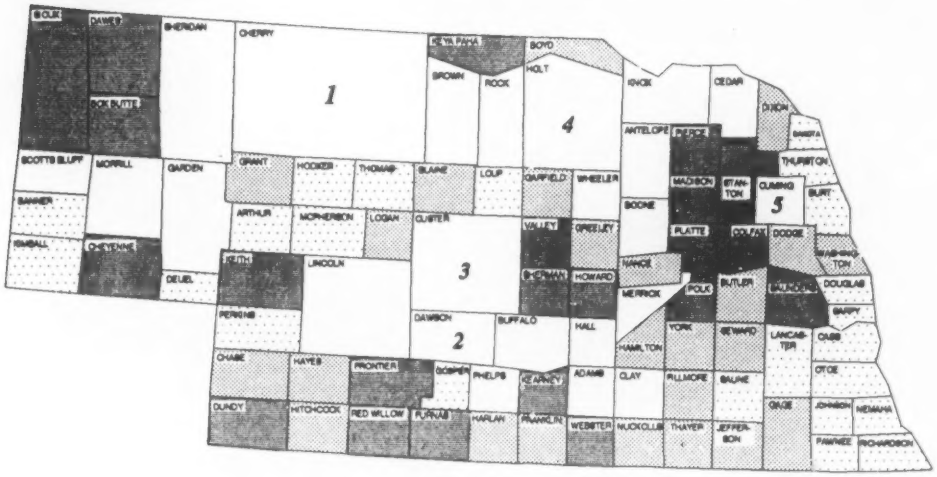
NEBRASKA--CATTLE INVENTORY, JANUARY 1, 1993



Under 36,000 head

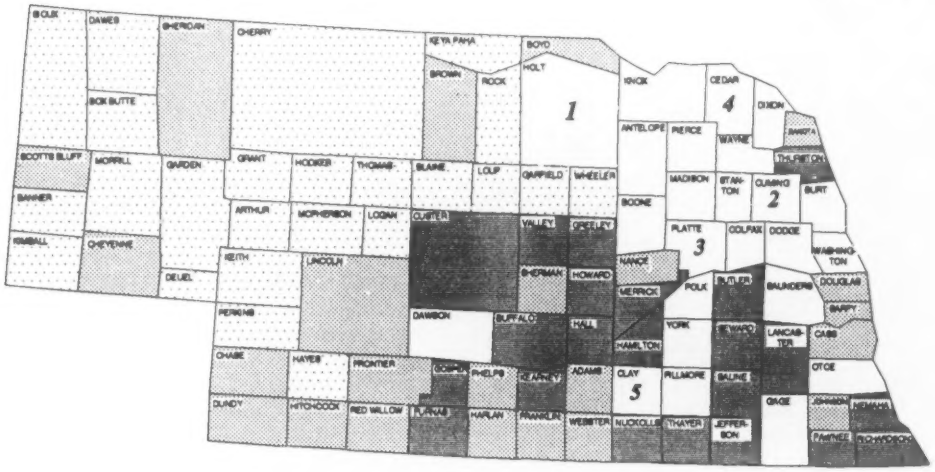
36,000-48,999 head

49,000-72,999 head

73,000 head and over

Numbers indicate five leading counties

NEBRASKA--HOG INVENTORY, DECEMBER 1, 1992



Under 10,000 head

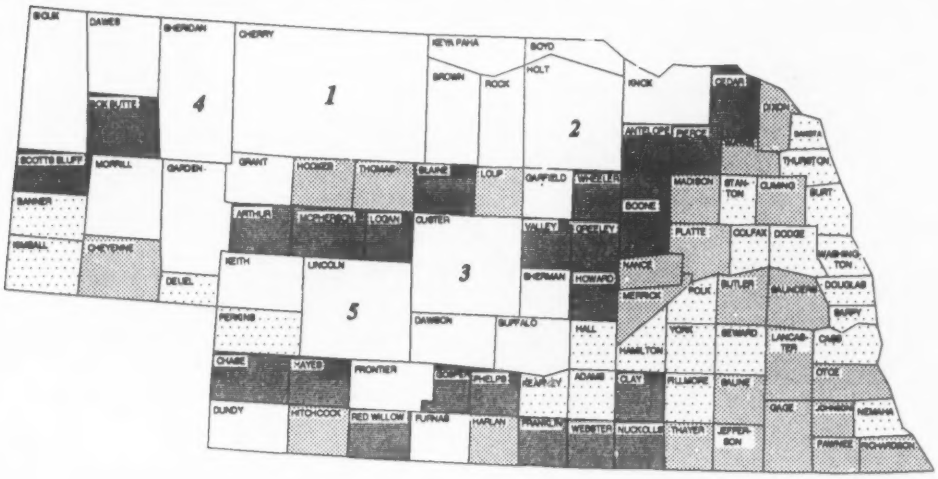
10,000-35,999 head

36,000-59,999 head

60,000 head and over

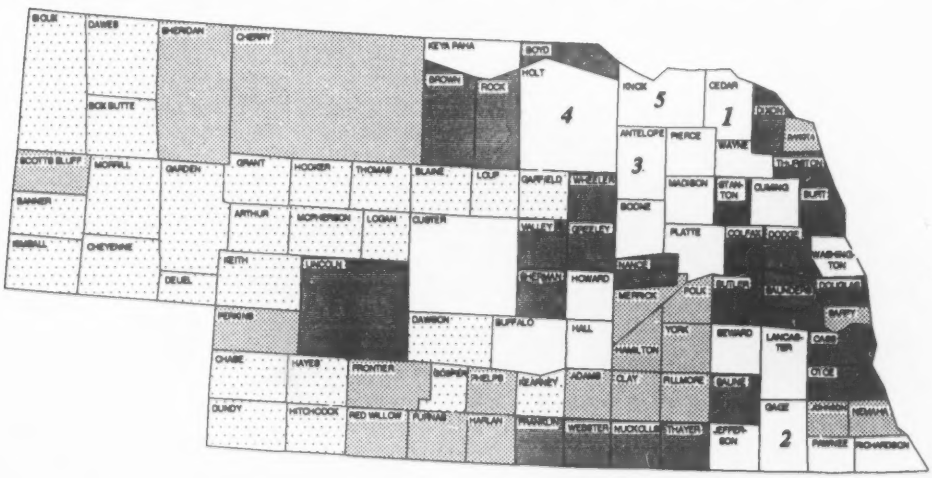
Numbers indicate five leading counties

NEBRASKA--BEEF COW INVENTORY, JANUARY 1, 1993



Under 10,000 head
10,000-14,499 head
14,500-18,999 head
19,000 head and over
Numbers indicate five leading counties

NEBRASKA--MILK COW INVENTORY, JANUARY 1, 1993



Under 200 head
200-649 head
650-1,249 head
1,250 head and over
Numbers indicate five leading counties

PRICE ESTIMATING PROCEDURES IN NEBRASKA

Crop price estimates for small grains and corn, sorghum grain and soybeans are based on monthly survey responses from a sample of 140 grain elevators. The sample is redrawn each year from a universe of about 750 licensed commercial grain elevators. A stratified sample based on elevator capacity and distribution across the State provides representative monthly prices paid to farmers and volume purchased by districts. Estimated volume purchased by months and production by agricultural statistics district are used to obtain the weighted marketing year average price for crops and hays.

Hay price estimates are obtained from monthly cattle on feed survey respondents and hay producers selling hay. **Dry edible bean** handlers and **sugar beet** processors provide their respective prices paid and volume purchased.

Livestock prices, head and liveweight sold by species are obtained from surveying livestock auctions, packers, dealers and the Omaha stockyards each month. **Milk cow** replacement prices are reported by quarterly milk production survey respondents.

1/ 1991 & 1992 preliminary. 2/ Value of production estimates are based on the following marketing years: corn, sorghum, soybeans and dry edible beans, September 1-August 31; wheat and oats, June 1-May 31; hay, June 1-May 31. Other crops are based on their respective cropping year. 3/ The 1989-1992 all hay prices were derived by computing the value of alfalfa and other hay using district production and prices and using their combined value and production to compute the all hay prices. All hay and alfalfa hay are published to the nearest $.50 per ton; other hay is published to the nearest $.10 per ton. Prior to 1989, all hay prices were established first and then the alfalfa and other hay prices were derived.

NEBRASKA FARM DEBT-TO-ASSET RATIO

As the number of farms remained unchanged from 1991 to 1992, the debt-to-asset ratio for Nebraska farms at the end of 1992 increased slightly to 18.98 percent. This was up 0.18 point from 1991, 0.91 point above 1990, and 0.74 point more than 1989. The debt-to-asset ratio peaked in 1985 at 32.07 percent.

On December 31, 1992, the value of farm assets in Nebraska, excluding operator households, totaled an estimated $36.1 billion. Proprietors' equity amounted to nearly $29.3 billion after accounting for total farm debt of $6.9 billion. With 56,000 farms in 1992, this translates into per farm averages of $644,911 in assets, $522,482 in proprietors' equity, and $122,429 of debt.

The Farm Business Balance Sheet assembles into one statement the major farm asset inventory and liability accounts. These estimates are compiled by the Agriculture and Rural Economy Division, Economic Research Service, U.S. Department of Agriculture.

1/ Value added to gross income. Value added to net farm income equals the difference in net farm income and returns to operators. 2/ Statistics in and above the Net Farm Income line represent the farm sector, defined as including farm operator's dwellings located on the farms. Statistics below the Net Farm Income line represent only the farm businesses to the exclusion of the operators' dwellings. 3/ Returns to operators is equivalent to net farm income excluding the income and expenses associated with farm operators' dwellings.

DISTRIBUTION & SOURCE OF NEBRASKA AGRICULTURAL STATISTICAL DATA

Reports on many commodities are available free to individuals and firms that may be asked to provide information on surveys made by the Nebraska Agricultural Statistics Service. Others may receive the reports on a paid subscription basis. Timely summaries of all major reports are provided the news media, radio and TV stations, and educational establishments to serve Nebraska farmers, ranchers, and others with agri-business interests. Highlights of the reports and other USDA data are covered in "Nebraska Agri-Facts," issued twice monthly. The title of current reports covering Nebraska and national agricultural estimates, month of publication, and source of data used to obtain the estimates are shown in this table.
